

K.D.S. Oshadha

Software Engineering Graduate

supunoshadha23@gmail.com | 0710406742 | 1159/A, Dalupitiya road, Hunupitiya, Wattala

GitHub | LinkedIn | HackerRank | Portfolio

Objective

A Software Engineering graduate with a solid academic foundation and a 6-month university IT division internship experience. Proven expertise in backend logic, API testing via Postman, and system support. Currently expanding technical capabilities into Cisco Networking and Systems Administration, seeking an entry-level NOC Trainee, Technical Specialist, or IT Support role.

Education

The Open University of Sri Lanka	Colombo, Sri Lanka
Bachelor of Software Engineering (Hons)	2022 - 2026
<i>Graduation: November 2026 (All Academic Requirements Completed)</i>	
Thurstan College	Colombo 07
Physical Science Stream A/L	

Experience

Software Engineering Intern - IT Division, The Open University of Sri Lanka

May 2025 – October 2025

- Worked on Laravel and Spring Boot backend projects with React and Angular frontends
- Assisted in understanding requirements and validating implemented features
- Performed basic functional testing and API testing using Postman
- Identified bugs and supported debugging during development
- Followed assigned tasks accurately and delivered work on time

Technical Skills

- Programming Languages: Java, JavaScript, Python, PHP
- Web Technologies: HTML, CSS, TailwindCSS
- Libraries/Frameworks: React, Node.js, Express, Spring Boot, Laravel, Angular
- Databases: PostgreSQL, MySQL, MongoDB
- Networking & Systems: Routing & Switching Basics, TCP/IP, DNS, DHCP, Cisco IOS CLI, Wi-Fi Troubleshooting
- Tools / Platforms: Git, VS Code, Jira, Trello, Postman, Jmeter, IntelliJ IDEA, Figma
- Data Formats: SQL, JSON, XML

Projects

Cisco CCNA Packet Tracer Labs Portfolio | [GitHub Link]

Tech Stack: Cisco Packet Tracer, Network Simulation, Cisco IOS CLI

- Building and maintaining a dedicated repository documenting practical network configuration and troubleshooting.
- Practicing foundational routing, switching, and device configurations via simulated topologies.

SILENTTALK: Sinhala Sign Language Interface for LLMs Published in **IEEE Xplore (Link)** | Selected for **SLAII (2025/26)** *Tech Stack: Python, MediaPipe, OpenCV, BiLSTM, Conv1d, Rulebased NLP, Gemini API*

Final-year group project developing an end-to-end system for real-time Sinhala Sign Language recognition and interaction with Large Language Models.

- Managing the preprocessing and training workflow for deep learning models using the SSL400 dataset.
- Implementing NLP pipelines to convert gesture sequences into grammatically correct Sinhala sentences.
- Designed modular architecture with class diagrams, activity diagrams, and sequence diagrams.
- Focused on accessibility for the Deaf and Hard of Hearing (DHH) community in Sri Lanka.

Compiler Construction Design | Link - *Tech Stack: C, Flex, GCC*

Final-year project implementing the code generation phase of a compiler, producing Three Address Code (TAC) from source programs. Designed register allocation with virtual temporaries and stack-based memory management, generated TAC for expressions, control flow, functions, and I/O, and integrated outputs including symbol table, error logs, and derivation traces. Verified correctness through manual and automated test cases.

RecipeShare | Link - *Tech Stack: React, Nodejs, Express, MongoDB, TailwindCss*

RecipeShare is a user-friendly web application designed to allow users to share, discover, and interact with a variety of recipes.

Quick Fit Algorithm | Link

A Java-based simulation of the Quick Fit memory allocation algorithm. This project allows users to dynamically allocate and manage memory blocks using efficient techniques to reduce allocation time and fragmentation.

ParkMate Mobile App | Link - *Tech Stack: Java, Android*

ParkMate is a mobile application developed to help users find and manage parking spaces in urban areas. The app allows users to view available parking spots, and reserve them in advance.

AI Job Application Assistant | Link - *Tech Stack: Python, SpaCy, Tkinter*

An intelligent system that analyzes resumes and job descriptions to provide feedback on missing sections and skills. It calculates a suitability score and generates interview practice questions, helping students tailor applications and improve job readiness.

Certifications

Google IT Support Professional Certificate (In Progress) - Technical Support Fundamentals

Data-Center & Network Administrator (DNA) – VTC Dehiwala (*Following*)

Cisco Certified Network Associate (CCNA 200-301) (In Progress)

Google AI Essentials - Google

Computer Hardware Basics – Cisco

Verified Technical Skills Badges (Java, Software Engineer Intern (Role), Javascript, SQL) -

HackerRank

Software Engineering Intern Service Letter (ITD - OUSL)

Soft Skills

Team collaboration, analytical problem-solving, high adaptability under pressure, effective technical communication, and structured time management.
